in the 21st century air conditioning is considered a basic necessity for the modern lifestyle of human beings this book air conditioning technologies and applications provides several studies on the latest advancements in the air conditioning field the book focuses on energy efficiency sustainability and innovative technologies for developing environment friendly air conditioning systems the book explores emerging technologies i e evaporative cooling air conditioning sea water air conditioning advanced air conditioning materials localized air conditioning heat pipe heat exchangers air conditioning and modernization of synthetic fluids by natural refrigerants for various applications including greenhouse temperature humidity control zero energy buildings etc the book provides a valuable resource for engineers researchers and industry professionals developing energy efficient air conditioning systems for different applications

the authors and editors of this volume state that with the intensive growth of global industrialization and urbanization the consumption of various resources and materials such as energy minerals and even water is increasing at an amazing speed which poses great pressure on material resources in addition the massive utilization of materials has led to low efficiency resulting in great wastes of resources as well as serious environmental pollutions and degradation which has severely hindered the sustainable development of economy and society in order to transit to sustainable development it is necessary to improved resource efficiency and circular economy and waste valorization are the best alternative ways for achieving this goal this book aims to provide an in depth description of circular economy and waste valorization make assessments for circular economy and waste valorization in different regions and countries and determine the technological pathways and

roadmap for achieving circular economy and waste valorization more specifically 1 conceptions and theories concepts and definitions of circular economy and waste valorization and their nexus and contributions to sustainable development 2 policy and practice measurement and assessment of performance or sustainability for implementing circular economy and waste valorization 3 pathways and prospects identification and prioritization of the barriers strategies technologies and pathways for achieving circular economy and waste valorization the book systematically and comprehensively introduces the definitions concepts framework and nexus of circular economy and waste valorization analyzes and measures their performance and sustainability and provides the methods for investigating and prioritizing the barriers and strategies and determining the pathways and roadmap for their development

recent developments in model predictive control promise remarkable opportunities for designing multi input multi output control systems and improving the control of single input single output systems this volume provides a definitive survey of the latest model predictive control methods available to engineers and scientists today the initial set of chapters present various methods for managing uncertainty in systems including stochastic model predictive control with the advent of affordable and fast computation control engineers now need to think about using computationally intensive controls so the second part of this book addresses the solution of optimization problems in real time for model predictive control the theory and applications of control theory often influence each other so the last section of handbook of model predictive control rounds out the book with representative applications to automobiles healthcare robotics and finance the chapters in this volume will be useful to working engineers scientists and mathematicians as well as students and faculty interested in the progression of control theory future developments in mpc will no doubt build from concepts demonstrated in this book and anyone with an interest in mpc will find fruitful information and suggestions for additional reading

this book describes how comfort energy and climate change in developing countries and vulnerable sectors of the population relate to buildings the building sector is currently facing significant challenges connected to energy consumption energy poverty and climate change effects when studied in developing countries and vulnerable sectors of the population these factors which are commonplace in the tropics and the southern hemisphere are interlinked and share a critical component environmental comfort although progress has been made in environmental comfort through research and the development of standards and policies at the international level in the global south where the countries with the highest levels of income inequality are concentrated environmental comfort has its own characteristics and challenges that prevent a clear understanding from the established vision of the global north this book presents research theories and techniques related to thermal comfort indoor air quality visual comfort and acoustic comfort and its relationship with energy use and energy efficiency seeking to address different barriers to environmental comfort it shows how to improve the way buildings are designed and operated to promote healthier environmental conditions and more sustainable construction by presenting studies and reflections carried out in the target geographical area the global south in this way this book contributes to developing the concept of environmental comfort visualising how progress has been made in understanding it from a tropical and southern perspective and posing common challenges the book is intended for engineers architects and researchers of the built environment who are interested in environmental comfort and its influence on energy consumption energy poverty and other related factors in the global south context it is also a useful resource for decision makers and public policy developers concerned with the indoor comfort of buildings moreover the book aims to provide guidance for those in developing countries by gathering existing knowledge in the field for the tropics and southern hemisphere climatic and sociocultural contexts allowing us to move forward in this subject with actions and proposed solutions that fit our particular needs
